

APEX: RHIC Continuous Orbit Feedback (01/27/10)

A. Marusic, R. Michnoff, M. Minty, V. Ptitsyn, G. Robert-Demolaize, T. Satogata

Changes since the last tests during initial beam commissioning:

- 1) (BPM-based) design orbits now contain separation bumps
- 2) model matrices updated to Au104
- 3) horizontal/vertical BPM offsets changed
- 4) SVD tolerance cut (effective, on number of degrees of freedom) added
- 5) added dynamic exception handling (based on rigidity) for max corrector strengths
- 6) added numerous diagnostic features including a time-stamp correction which affected viewing data in BPM Orbit Statistics)

Achieved:

verified convergence of feedback at injection energy in all 4 planes
devoted some time to eliminating suspect BPMs - in particular discovered model/application error concerning one dual-plane in the yellow ring
executed 2 ramps with feedback on in blue and yellow and in both planes

RHIC Continuous Orbit Feedback (01/27/10) - convergence tests

RHIC Continuous Orbit Feedback (01/27/10) – energy ramp #1

RHIC Continuous Orbit Feedback (01/27/10) - energy ramp #2c

RHIC Continuous Orbit Feedback, next APEX

request ~ 2 hours (with plans to be developed this afternoon) likely involving

- 1) dedicated test of horizontal feedback during energy ramp
- 2) ramp to store (with target orbit without separation bumps)
- 3) test of feedback under store conditions (fixed optics)

continuous orbit feedback meeting: Friday, 01/29/10 at 13:30 in the SCR

Minty, Michiko

Sent: Thu 1/28/2010 4:02 PM

 Message |  Minutes2010January10.doc (43 KB) |  Minutes2010January10.pdf (44 KB)

Greetings Everyone,

Let us meet tomorrow at 13:30 in the SCR to discuss status and plans for continuous orbit feedback.

Agenda (see also comments below):

- 1) Status update
- 2) BPMs
- 3) Reference orbits
- 4) Plans for future tests
- 5) Plans for making operational
- 6) Any other business

Attached please find also the minutes from our last meeting on continuous orbit feedback (01/11/10).

Thank you.

Regards, Michiko

P.S. Past meeting minutes and presentations of the past can be found at http://www.cadops.bnl.gov/Instrumentation/InstWiki/index.php/Orbit_Feedback,_Ramp

APEX meeting, 01/29/10

Blue Arc BPM Orbit Statistics

Yellow Arc BPM Orbit Statistics

Status: RHIC Continuous Orbit Feedback

A. Marusic, R. Michnoff, M. Minty, V. Ptitsyn, G. Robert-Demolaize, T. Satogata

since 12/01/09 presentation:

Guillaume: computation time for generation of optical matrices
reduced from 20 hours to 6 hours; full set of matrices
for Au101 and Au100 generated

Vadim: correction algorithm interactions (mostly) completed (including
exception handling!)
input
optics - e.g. 2pi bug in OrbCorrMan.cxx
BPMs - renaming during shutdown, exclusion of RF and DX BPMs
output
corrector strengths - e.g. number of, unit conversions

Al: OrbitFBMan (cross between WFGMan and OrbitMan and
RHICOrbitDisplay) developed (enormous effort!)

WFGMan modified to program WFGs of correctors:

WFGs: sum in corrections to linear interpolation between stones

WFG ADOs: modified to accept corrections and deliver to WFGs
at 720 Hz rate (effectively ramping in corrections)

Test results at injection energy: blue ring (12/14/09)

← convergence to (0.2 ± 0.1) mm

ready for commissioning during energy ramp (blue ring)

Test results at injection energy: yellow ring (12/14/09)

convergence to
(0.2 \pm 0.1) mm

Possible causes for beam loss in yellow ring:
BPM offsets
poor initial conditions (after only ~12 hours beam time)

BLUE: $|xcors| < 0.2 \text{ mrad}; |ycors| < 0.15$
YELLOW: $|xcors| < 0.2 \text{ mrad}; |ycors| < 0.3$

summary of measurements at injection energy

CORRECTION RATE	BLUE RING	YELLOW RING
1%	(not measured)	250 s
5%	30 s	50 s
10%	15 s	25 s
BEAM LOSS?	NO	YES

Next steps:

commission orbit feedback during ramp in blue
continue tests at injection in yellow (with better boundary conditions)
lots of additional code work:
 develop capability for feed-forward of corrections
 nonzero design orbits, ...
performance analyses (e.g. understand achieved rms values and limitations)
